# Introduction

"

"The true...investor will do better if he forgets about the stock market and pays attention to his dividend returns and to the operation results of his companies."

Benjamin Graham

Why do dividend investors tend to outperform other strategies in the market?

In the financial world today, we're constantly told that the most important thing about an asset is its price movement. News outlets are always hyping stock market swings, with daily updates on index moves, top gainers, and biggest losers. But not much attention is given to dividend changes, which are essential for long-term investing.

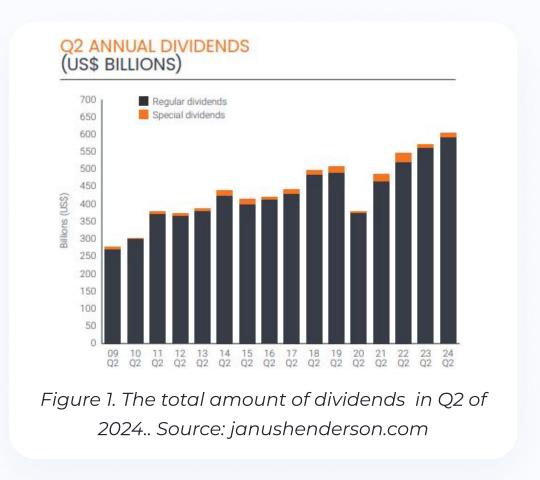

Most investors never reach real wealth, and a huge reason for this is their tendency to panic every time prices take a dip. Many investors get thrilled when an asset jumps but struggle to handle a simple 5% drop—they often sell in a panic. Price swings happen every day in a market full of speculators, but companies paying dividends to shareholders offer stability. There are over 211 U.S. companies that have maintained or even boosted their dividends over the past 10 years!

When you focus on dividends, you're getting consistent, reliable returns on your capital, which brings peace of mind and confidence in your investments.

#### **Global. Latest Dividend Data**

The cumulative global dividend payout for Q2 2024 continued the upward trend of Q2 2020. This suggests that most dividend companies have calmly endured the effects of the 2020 crisis and adapted their businesses to the new reality. As a consequence, they continued to increase their dividend payouts.

Companies paid out \$606.1 billion in dividends in the second quarter of 2024. For comparison, in Q2 2023, companies collectively paid out \$572.7 billion (Figure 1).

The dividend growth leaders in the second quarter were UK and Europe ex UK. They showed an increase of 13.8% and 7.7%, respectively. Among those regions that showed negative dynamics in dividend growth, Asia Pacific ex Japan is the leader. The drop in dividend payments was 5.1%, respectively.

#### The US Dividend Data

Dividend	Current dividend yield ETF VOO	Average 5 year dividend yield ETF VOO	Div. growth (TTM) ETF VOO	Dividend growth 5 years ETF VOO	Dividend growth 10 years ETF VOO		
Yield	1,24%	1,52%	8,64%	4,49%	7,19%		

Table 1: Overall performance. Source: seekingalpha.com

The dividend yield of the S&P 500 has halved over the past 10 years. It is now 1.24%, which suggests that the price of stocks relative to dividends is higher than normal. Therefore, dividend yield is at a lower lows.

Inflation growth rate is high and exceeds the rate of dividend growth. Therefore, the S&P 500 dividend chart is showing a correction.

However, high inflation will not hold forever.

Once the correction ends, the chart will turn around again. Thus, over the last reporting periods, inflation has been steadily declining.
